**Abstract**

Space flight has many problems to solve, such as the speed, energy, time, lifespan, time-space travel and environmental adaptation of aircraft and astronauts, as well as the generation of aircraft. Quasars in the universe are the prototype of light-speed aircraft. The change in states of galaxies is the prototype of the change in state of light-speed aircraft. The structure prototype of light-speed aircraft is the Solar System and galaxies. Inorganic materials are the material prototype of light-speed aircraft. The huge life energy and power in the universe is the energy and power source of light-speed aircraft. Light-speed aircraft is inorganic life body. The prototype of astronauts is the people in deep meditation. Meditation can activate the 3, 2, 1 and 0-dimensional states in human bodies, thus solving the problems of time, lifespan, time travel and food/energy for astronauts. Ways of light-speed aircraft and astronauts to attain universe life energy and speed: correspondence or resonance at the same frequency. Physical aircraft cannot travel among stars. The principle of the faster-than-light flight of light-speed aircraft is to transform into nature light by changing states and enter the universe body. The universe body has no distance so aircraft can reach the destination in a instant and then transform into physical bodies. The sensing system of light-speed aircraft is the universe holographic sensing system. Their brains/calculators are life calculators whose nerve cells are inorganic life cells. Human generation nowadays is assembling. Chip lithography technology comes down to light generating everything. The generation of light-speed aircraft is to base on life nature light plus aircraft design plus life material plus generation ability.

**Keywords:** Light-speed Aircraft, Astronaut, Light Speed, Life Energy, Lifespan, Time Travel, Research.

**Introduction**

The former Soviet Union scientist, Konstantin E. Tsiolkovsky, once said, "The Earth is the cradle of humans, but humans cannot live in the cradle forever." His words have inspired numerous scientific and technical workers. To our regret, humans have never made significant progress in spaceflight. Our range of spaceflight has always been restricted around the Earth. There is a long way to go before we fly away from the Solar System. Our present scientific theories and technological levels cannot promise the day when we humans fly away from the Solar System to do space travel and immigrate to other planets. But on the other hand, humans act like ignorant children to mess up the Earth with existing evil technologies, creating various disasters and turning the world into the hell. Our Earth is no longer fit for humans to live on, so we have to consider immigrating to another planet as soon as possible. That is to say, the present science and technology level of humans is still very low and we are on the wrong road. How can we get away from this dilemma and take humans into the space era? Major scientific and technological breakthroughs that could entirely overturn modern science and technology are in urgent need. What we need is research into light-speed aircraft that can travel among stars.

The reason why the levels of human science and technology are low is that modern scientists know little about the universe. The universe is life; the galaxies are inorganic lives (Jinzhong, 2013; Jinzhong & Zhangxi, 2019) and consist of intangible spiritual systems and tangible substances and physical systems, with the intangible dominating the tangible (An anonymous author, 2013). The two fundamental subjects of modern science, physics and biology, both research into tangible substances and are thus material science and technology. The substances in biology are more complex than those in physics, so chemical and biological weapons and viruses are eviler. Material technologies are simple and evil. Substances are nothing but boring. Substances belong to life; life is the core of the universe.

The universe is so vast that nothing is impossible. Quasars are inorganic lives (Jinzhong & Zhangxi, 2019), operating at light-speed levels (Yi, 2000), and represent the universe prototype of light-speed aircraft. The various miracles presented in different religious cultivation around the world are far from the reach of modern science and technology. The UFOs that appear from time to time have never failed to amaze humans on the Earth. All these mysterious things have constantly attracted people, inspiring them to do research into light-speed aircraft and struggle for the start of universe era of humans.

## Several Problems to Solve before Humans Enter Space

It's not easy for humans to enter the universe. There are several problems to solve.

1. The problem of speed. Present man-made aircraft cannot fly away from the Solar System at the rate of 10-30 km/s. Not to mention spaceflight. To fly among the stars, they have to reach the speed of light.
2. The problem of energy. Spaceflight are always long lasting, so aircraft must carry enough energy or can get energy supply from the surroundings at any time. However, the present human scientific theories cannot enable aircraft to carry enough energy; neither can they help aircraft get energy supply from the universe when needed. Thus, new energies have to be found. The best solution is to get energy supply from the universe at any time.
3. The problem of time. Calculated by light year, spaceflight is still long lasting in time. From the nearest star, which is four light years from the Earth, to the galaxies, which are decades or billions of light years away, humans cannot achieve spaceflight with present time theories. That is to say, there is something wrong with our present time theories.
4. The problem of human lifespan. The average lifespan of humans is only a little longer than 70 years, which is rather short compared with the time of spaceflight. We should make astronauts live long enough. That is to say, we should solve the problem of time or lifespan.
5. The problem of time-travel ability of light-speed aircraft and astronauts. There are four time-spaces in the universe, which means the states of both astronauts and light-speed aircraft will change at any time among 0, 1, 2, 3-dimensions. This change is not only in speed but also in visibility. The aircraft and astronauts must adapt to various surroundings and the change in surroundings in the universe. The mutual adaptation between human states and light-speed aircraft states is another major problem.
6. Generation of light-speed aircraft. Light-speed aircraft are the most basic requirements to realize spaceflight; they are the peak of tangible life technology in the universe. Their generation is also a problem.

## Basic Requirements for Spaceflight

The problems mentioned above are the basic requirements for spaceflight, including the requirements for aircraft and those for astronauts.

Basic requirements for aircraft: Aircraft must solve the difficult problems of speed, time travel, energy and environment adaptation. If aircraft can make use of different life energies and powers in the universe, they can reach or even surpass the speed of light and swift freely among the states of 3, 2, 1, 0-dimensions, visibly or invisibly. That means light-speed aircraft are inorganic life bodies that possess these four states at the same time and can automatically travel through these four states.

Basic requirements for astronauts. Astronauts must solve the difficult problems of lifespan, time travel and environment adaptation. It is also necessary for them to make full use of

different life energies and powers in the universe, and swift freely among the states of 3, 2, 1, 0-dimensions, visibly or invisibly. That means astronauts must have the ability for deep meditation, automatically travel through these four states, synchronously change with the aircraft and well adapt to different surroundings in the universe. Astronauts now cannot meet this requirement.

## Prototype of Light-speed Aircraft

According to the requirements for aircraft to do spaceflight, the heavenly bodies that can fly at the speed of light are the prototype of light-speed aircraft.

## Universe Prototype of Light-speed Aircraft — Quasars

Quasars are a specific state of galaxies. The average spiral galaxies rotate at a low speed and fly in the universe at a low speed but have very long diameters. Quasars move in the same way as galaxies but rotate at a high speed and fly at the speed of light, or even faster. Their diameters are of similar length to that of the Solar System, so their inner energy is much stronger than that of spiral galaxies, enough to meet the needs for energy, power and speed of aircraft. This is how they become the universe prototype of light-speed aircraft.

## Prototype of Light-speed Aircraft State Change — Galaxies

According to requirements, light-speed aircraft can change their states among 3, 2, 1 and 0 dimensions. Galaxies can also change their states among 3, 2, 1 and 0 dimensions. The forming process of galaxies is Tao generates 1, 1 generates 2 and 2 generates 3. That is to say, Tao 0 is the ontology galaxies, De 1 is vigor /wind wheel galaxies ,2 is water wheel galaxies ,3 is golden wheel galaxies. The generating of galaxies is a changing process from nothing to something, from simplicity to complexity, from high-energy to low-energy. It is a self-evolution / changing process. Human hearts are the hearts of galaxies. Galaxies can turn from low energy to high energy (Jinzhong & Zhangxi, 2025; Watson, 2018), from spiral galaxies and spheroidal galaxies to quasars and reach the speed of light with the help of human pure hearts and the recycling power of the universe body.

Galaxies' constant change in state is the prototype of the state change and time-space travel of light-speed aircraft.

## Structure Prototype of Light-speed Aircraft — Solar System and Galaxies

The Solar System is the epitome of galaxies, inorganic life and also the structure prototype of UFOs. The Solar System contains an intangible life structure, 10 heavenly stems (change mechanism, transforming mechanism), terrestrial branches (frame, movement, orbit, time, power and other systems), Tao 0 De 1, intangible systems and so on. The Solar System is an inorganic life body formed by an intangible system that organizes various tangible substances. The speed of the Solar System moving in the universe is 240km/s, which is much higher than the speed of man-made aircraft. The Solar System and galaxies are the structure prototype of UFOs.

## Material Prototype of Light-speed Aircraft — Inorganic Life Materials

From the structure of the Solar System, we know the substances that form the Solar System are various inorganic substances. They are four-seasonal, five-element substances and thus life substances. These substances combine to form a four-seasonal combination and four-seasonal life substances (Jinzhong & Zhangxi, 2019). All tangible life substances are dominated by an intangible system, forming the life Solar System. Likewise, the tangible materials forming UFOs are inorganic life materials formed by four-seasonal, five-element substances, not just single materials or the present composite material.

## Energy and Power Source of Light-speed Aircraft: the Huge Life Energy and Power in the Universe

There is huge power in the universe that makes the enormous galaxies and cluster of galaxies to rotate and move. This power is much stronger than quark confinement. Any physical power or physical energy cannot be compared with it. This power is life energy. The vast universe has a vast expanse of life energy that is limitless and inexhaustible. This mighty energy and power is just the energy and power source of numerous galaxies in the universe, and naturally the energy source of light-speed aircraft. But modern cosmology and physics have never done related research!

## Light-speed Aircraft are Inorganic Life Bodies

The universe prototype of light-speed aircraft is galaxies. Galaxies are inorganic lives, so light-speed aircraft are inorganic life bodies with tangible and intangible systems. They have the four 3, 2, 1, 0-dimensional states at the same time and can freely change and convert among the four states. Their speed can freely swift from 0 speed to light speed. They can be visible or invisible. They can attain tremendous life energy and power from the universe at any time.

## Prototype of Astronauts — People in Deep Meditation

The people who can do time-space travel (Jinzhong & Zhangxi, 2025) are the prototype of astronauts. This kind of people exists in abundance among Taoists and Buddhists. Time travel is the compression or extension of time.

As is known to us all, many people in the realm of cultivation have many amazing features, including their lifespan and sense of time. When people cultivate themselves, they cultivate the pure heart. As their hearts increase in purity, their states change from 3 to 2, 1 and 0 dimensions. When heart purity reaches 100%, people enter the state of 0 dimension, their lifespan becomes longer and their sense of time becomes shorter till it reaches 0 (Jinzhong & Zhangxi, 2025). Then, they can freely do time-space travel and get limitless energy supply from the universe. This solves the problems of time-space travel, lifespan, food and time for astronauts.

Thus, the prototype of astronauts is people with cultivating achievements. Besides, universe immigration is the common mission of people on the Earth, so anyone who wants to immigrate should cultivate meditation. With the truths of the

universe and life uncovered (Jinzhong & Zhangxi, 2025), people have realized that the mission of human life is to wake up to the truths, to consciously cultivate meditation, to go beyond the three realms and to go back to the universe body Tao 0.

## Major Energy of the Universe: Life Energy

The universe is life. The Solar System, galaxies, cluster of galaxies and super clusters are inorganic life and huge life forms with tremendous energy and speed. The birth and operation of heavenly bodies need a lot of energy and power. These energy and power are the multi-layered life energy of the universe. The universe body is like a boundless ocean with mighty energy in stock. The heavenly bodies in the universe are like the bubbles generated in the ocean which appear and disappear constantly. The major energy of the universe is life energy, which includes four layers: 3-dimensional life energy — qigong, 2-dimensional life energy — heart light, 1-dimensional life energy — De light and 0-dimensional life energy — Tao light or nature light (Jinzhong & Zhangxi, 2020). They must be made use of by light-speed aircraft.

When the limitless life energy and mighty power in the universe are utilized, the problems of energy and speed of light-speed aircraft can be solved.

The major energy of the universe is life energy. It is inner light so cannot be called dark energy.

## Ways for Light-speed Aircraft to Attain Universe Life Energy and Speed Boost: Correspondence or Resonance at the Same Frequency

The tremendous life energy and mighty operating speed of heavenly bodies in the universe must be used by light-speed aircraft. The way to use them is correspondence.

## Ways for Light-speed Aircraft to Attain Universe Life Energy: Correspondence

Correspondence means two objects with the same frequency respond to each other, meaning they both are in the same state. For example, kind people naturally get help from other kind people and evil people meet evil people. This is correspondence, the very thing to gain boost.

There are four layers of life energy in the universe. It was born with the universe and is constantly and actively supporting all the different lives in the universe. Whether an object can get the life energy and how much life energy it can get entirely depend on whether it can correspond to or have the same frequency as the layers of life energy. Only if the object can correspond to any layer of life energy, life energy can be naturally injected into the life body. This is very common in the realm of cultivation.

For example, the period from 9:00 pm to 11:00 pm is the working hours of triple energizer meridian. When people are asleep during this period, the triple energizer meridians in

their bodies are open and working. The energy released by the triple energizer meridian of the universe will automatically enter their body (An anonymous author, 2013), making them energetic. When people are awake during this period, their triple energizer meridians are closed and cannot obtain the boosting energy from the triple energizer meridian of the universe. They will become exhausted and in time things will go wrong with their bodies.

The correspondence of humans to the universe is the human-heaven integration, which helps humans to get the support from the life energy of the universe. Likewise, the integration of aircraft and the universe can also achieve energy boost from the universe.

#### **Ways for Light-speed Aircraft to Attain Speed Boost: Correspondence**

There are heavenly bodies travelling at different speeds in the universe, from very low speeds to speeds of light and faster-than-light. Different heavenly bodies have different speeds. To achieve a high speed or even the speed of light, aircraft only need to correspond to the high-speed or light-speed heavenly bodies in the universe, just like people who get on the high-speed train to achieve a high speed. Aircraft are inorganic life bodies with 3, 2, 1, 0-dimensional four layer states, which respectively correspond to the speed and energy of the four layers of heavenly bodies in the universe. Thus aircraft can get on the high-speed heavenly bodies in the universe to achieve high speeds.

#### **Physical Aircraft Cannot Travel among Stars**

#### **Physical Aircraft Have Only One State That Cannot Change**

The existing aircraft are all 3-dimensional. They are aircraft made of bond force substances and they are physical aircraft that have not evolved into 2-dimensional aircraft, namely nuclear-force aircraft. Physical aircraft need to bring energy or physical energy transforming systems along to power flying. They cannot make use of the limitless life energy in the university. Besides, physical aircraft only have one state: 3-dimensional state. They have no intangible system, thus unable to achieve time travel or adapt to different surroundings in the universe.

#### **Three-dimensional Objects Cannot Reach the Speed of Light / High Speed**

According to Einstein's formula of mass changing with speed  $m = \frac{m_0}{\sqrt{1 - \frac{v^2}{c^2}}}$  ( $m_0$  is the mass of a substance when it is still,  $m$  is the mass when the speed is  $v$ , and  $c$  is the speed of light in vacuum), when the speed of the substance gets close to the speed of light  $c$ , the mass of a substance tends to get infinite. Thus any aircraft with mass can never reach the speed of light.

However, the speed of some particles that have mass is the speed of light. Even so, as physical aircraft cannot be changed into light and cannot reach the speed of light, they are still not light-speed aircraft.

#### **Physical Aircraft Cannot Solve the Problem of Energy**

The major energy of humans at present is 3-dimensional substantial energy: bond force energy. 2-mentional substantial energy is nuclear energy, but humans can only utilize nuclear fission. 1-dimensional substantial energy (quark confinement) and 0-dimensional substantial energy (neutrino) are still out of our reach (Jinzhong, 2014). The energy of substances is quite low and cannot make aircraft achieve high speeds. It is also one-time energy and cannot be supplied in time.

Physical aircraft cannot correspond to universal life or attain the tremendous life energy and speed from the universe, so they cannot travel far.

#### **Physical Aircraft Have Difficulty Adapting to the Universal Environment**

The universe is life. Compared with it, physical aircraft are inferior objects that cannot adapt to the universal environment. Although the existing spaceships are intelligent to some degree, they can only adapt to the universal environment of a small range.

#### **Flying Principles of Aircraft's Faster-than-light Flight**

Light-speed aircraft are inorganic life bodies, which have 3, 2, 1, 0-dimensional four life states at the same time and can swift among the four states freely. However, 0-dimensional life state is the universe body Tao 0. The universe body has no size or distance. That is to say, it goes beyond size, distance and all the relative concepts. In the universe body, the farthest galaxies are just before your eyes. Thus, we first should enter the light-speed aircraft into the state of universe body, making them go beyond any distance. Then, we can make the aircraft appear in any position we want at will, reaching the destination in a distant (Gautama, 2018; Watson, 2018) and achieving faster-than-light flight. This is the principle of aircraft's faster-than-light flight.

#### **The Sensing System of Light-speed Aircraft — An Entire and Holographic Sensing System**

The sensing system of light-speed aircraft is the entire and holographic sensing system with the six roots of sensations: eye, ear, nose, tongue, body and feeling, four layers and the universe holographic sensing ability (Jinzhong & Zhangxi, 2025). It can sense all the states of the universe, which is much better than the existing physical sensing. The physical sensing must turn into life sensing. See Table1.

**Table 1:** From physical sensing to life sensing (from bottom to top)

Sensing objects	Sensing type	Features of the six roots of sensations
<b>Life sensing</b>		
universe holography	Holographic sensing	Knowing everything
Life	0-dimensional sensing	The six roots at ease
	1-dimensional sensing	The six roots interoperability
	2-dimensional sensing	The six roots high-energy compact
	3-dimensional sensing	The six roots integrating into a loose compact
<b>Physical sensing</b>		
Substances and substantial system	Substantial thinking sensing, intelligent sensing	Six-root combination, detecting thinking, intelligence
	Substantial entire sensing	Six-root combination, detecting the entire body, high-energy
	Substantial internal sensing	Six-root separation, detecting inward, middle and high-energy
	Substantial external sensing	Six-root separation, detecting outward, low-energy

Every part of light-speed aircraft is a structure with energy as well as six roots of sensations (eye, ear, nose, tongue, body and feeling) and intelligence. Each part has the sensing ability. The sensing and detecting system of light-speed aircraft is an entire simultaneous observation, not like the existing scanning detection.

### The Control Center of Light-speed Aircraft

### The Development Process of Computers: From Physical Computers to Life Computers

The computer is a simulation of human brain. From the early mode that could only calculate to the present one with primary thinking, the computer has been learning to simulate more and

more functions of human brain. But calculators or computers still have a long way to go compared with human brains. The reason is that human brains are made up of nerve cells but computers are made of transistors. So computers are just physical brains, not life brains.

The light-speed aircraft are life, whose brains are the universe holographic brains and are inorganic life brains or life computers with inorganic life cells as the nerve cells. Like the entire body, it has 3, 2, 1, 0-dimensional four states. The existing physical computers, even though they have developed to be intelligent ones, are still low leveled. Physical computers have to be transformed into life computers. See Table 2.

**Table 2:** The development process of computers (from bottom to top)

Types of computers	Levels of computers
Holographic inorganic life brain	universe holographic brain
Inorganic life computer	0-dimensional life computer
	1-dimensional life computer
	2-dimensional life computer
	3-dimensional life computer
Physical/Silicon-based computers	Intelligent computer
	Integrated system computer
	Integrated circuit computer
	Electronic valve, transistor computer

Physical computers are silicon-based with physical brains. But inorganic life computers have human brains which completely copy human brains. They have much stronger thinking and calculating abilities than existing computers.

### Light-speed aircraft are Inorganic Life Bodies Controlled by the Universe General Rule

Light-speed aircraft are life bodies with the universe general rule. The brains have a four-dimension thinking (heart) system (Jinzhong & Zhangxi, 2019). Light-speed aircraft are inorganic life bodies controlled by the universe general rule.

Light-speed aircraft control the internal four-seasonal operation highly intelligently with the general-rule brains. They automatically attain life energy from the universe and control the state shifts of aircraft among 3, 2, 1, 0-dimensions. The flying speed of aircraft can be adjusted freely from 0 to 300,000km/s. They can even surpass the speed of light. Aircraft are changeable in visibility, visible or invisible at any time. They can have mass or have no mass at any time. Their states change with the surroundings in time. All these changes and shifts are a fully automatic and intelligent adjusting process.

## Generation of Light-speed Aircraft

### Generating Method of the Universe: Overall Sudden Emergence

The universe is life, so what it generates is also life. Substances, substantial systems and tissues are generated with life at the same time. Generating methods of the universe include viviparity, oviparity, samsvedaja and metaplasia (Litian, 2013). The feature of universe and life generation is overall generation, which means all the living things and galaxies

emerge at the same time (Jinzhong & Zhangxi, 2025). They are not evolved from atoms and molecules to cells and living things; nor are they born from the big bang of the singularity of space time.

The universe has incredible and mighty generation ability (Jinzhong & Zhangxi, 2025). Universe generation includes 3, 2, 1, 0-dimensional life generations. The generation of life is metaplasia and an overall emergence triggered by life light and thinking. See Table 3.

**Table 3:** Life generation of the universe

Generated objects	Generating conditions	Generating methods
Universe body	Motionless, appear randomly	Metaplasia, light generating everything
0-dimensional life	The universe body	
1-dimensional life	Tao light + delusion	Metaplasia, overall generation
2-dimensional life	Tao light + delusion + separation	Metaplasia, overall generation
3-dimensional life	Tao light + delusion + separation + obsession	viviparity, oviparity, samsvedaja, overall generation

### Generation Method of Humans and Its Development

At present, generation of humans are physical generation, generating all kinds of tangible man-made objects, including tools, items, machines, systems, computers, robots and spaceship, etc.

The generating process of humans is also based on the universe general rule (Jinzhong & Zhangxi, 2025; Jinzhong & Zhangxi, 2025). Humans' physical generation (tangible generation) began with natural substances like stones and develops from the outside to the inside, from the individual to the whole. Physical generation also include 3, 2, 1, 0-dimensional generation and evolution.

3-dimensional generation: Generation of tools and items made by hand without any power machine.

2-dimensional generation: Generation of power machines made by means of parts plus assembling, with production lines for various machines.

1-dimensional generation: Overall generation represented by integrated circuit. Overall physical generation is still not complete.

0-dimensional generation: Overall growth starting from inorganic life seeds. According to the external set, ingredients are poured in. Exposed to the life light, seeds will grow to generate life.

At present, most physical generation is made by means of parts plus assembling. Some parts are generated overall, such as cast objects and photoetched chips (Yanqin & Zhen, 2020). In the near future, humans will begin 0-dimensional generation, namely 3-dimensional life generation to connect with universe generation in Table 3. This can generate inorganic lives and organic lives.

### Replication of Human Brain Thinking (Thought Reading) and Its Infusion

According to cognitive science, humans can sense the thinking of others and then copy, memorize and store it (Jinzhong & Zhangxi, 2025). Humans can now generate low-level thinking

sensors which can sense one single side of low-level human thinking. In the future, the thinking-sensing devices can copy humans thinking and store and inject it to the thinking of other people or inorganic lives. This technique, if used for knowledge acquisition, can turn an ignorant person into a learned one. This is similar to document copy on computers.

The connection of human brains and computers: humans are now doing research into brain-machine interface. It's the connection of physical chips to human brains, not the direct connection of human thoughts to computers. As computers are still physical brains not life brain, they are not in the same level as human brains.

### Light Photoetches Human Bodies Based on Thinking

Everything in the universe is generated by thinking, namely body plus thinking. The universe generates everything (Litian, 2013). Humans get the physical body with the general body plus five disciplines plus kindness. Beasts are generated with the general body plus ignorance. The general body can generate anything based on people's thinking, which is extremely amazing (Jinzhong & Zhangxi, 2025).

Man-made items are generated by thinking. Various man-made items, machines, roads and traffic, factories, production lines, aircraft, computers, robots, intelligent systems and so on are all generated according to human thoughts/design with various materials and manufacturing abilities. At present, the most complex nanometer chips are made based on people's chip designs, special light, special materials and complex manufacturing ability.

### Generation of Light-speed Aircraft: Nature Light Generating Method

Basing on human thoughts and duplicate thinking, using nature life light, we can light generate or photoetch various inorganic men. The principles of photoetching machines have reached the principles of light generating everything (Jinzhong & Zhangxi, 2025). According to humans' right design for life,

holographic inorganic life can be generated overall using the natural light.

According to Buddhists' "Everything is created by heart thinking", light-speed aircraft are inorganic holographic life that contains the universe general rule. That is to say, they can be generated based on the systematic structure of light-speed aircraft (intangible design) and using nature light (holographic life light). The light generation techniques are also Metaplasia.

## Conclusion

1. Space flight has many problems to solve, such as the speed, energy, time, lifespan, time-space travel and environmental adaptation of aircraft and astronauts, as well as the generation of aircraft.
2. Light-speed quasars are the universe prototype of light-speed aircraft. The change in states of galaxies is the change prototype of light-speed aircraft. The Solar System and galaxies are the structure prototype of light-speed aircraft. Inorganic life materials are its material prototype. The tremendous life energy and power in the universe are the energy and power sources of light-speed aircraft. Light-speed aircraft are organic life.
3. The prototype of astronauts is those in deep meditation. They have pure hearts and longer lifespan, and can freely travel through 3, 2, 1, 0-dimensional four time-spaces and communicate with the universe to get energy. Quasars and people in deep meditation can solve various problems during space flight.
4. The major energy in the universe is life energy, including 3, 2, 1, 0-dimensional life energy, which are not dark energy. Light-speed aircraft and astronauts attain life energy and speed from the universe by correspondence or resonance at the same frequency, meaning the two has similar states to the states of the universe.
5. Physical aircraft only one state and cannot do time travel, attain life energy from the universe, reach the speed of light or cannot travel in the universe.
6. The flight principle of light-speed aircraft is to shift the state of light-speed aircraft. The aircraft turn into natural light to enter the universe body. As the universe body has no distance, the aircraft can fly at a speed faster than light. After an instant, aircraft reach the destination and turn back into physical bodies.
7. The sensing system of light-speed aircraft is the universe holographic sensing system which can sense everything in the universe.
8. Light-speed aircraft is inorganic life bodies controlled by the universe general rule. Their brains/computers are life computers using inorganic life cells as the nerve cells.
9. Human generation nowadays is assembling. Chip lithography technology has reached light generating everything. Universe generation is overall emergence. The generation of light-speed aircraft makes use of life natural light plus aircraft design plus life materials plus generation ability.
