Abstract

Science is the activities to explore nature, society and humans to gain knowledge. It is mainly divided into life science and physical science. All varieties of science are unified into the universal general rule. Life science is the leading science in the universe and the good science while physical science is abnormal and evil science. China is located in a four-season balanced place and an open place, which is why the universal general rule happened in China and also why the Chinese civilization has never been interrupted. Europe is located in a place where four seasons are unbalanced, which is why modern physical science happened in Europe. The overall four-seasonal movement of the Solar System is the universal background for the shift from eastern science to western science. Modern science has come to the end and is turning to eastern new science, which is the new life science combining I Ching, Taoism, Buddhism, Confucianism, TCM with modern technology. It includes the revival of traditional cultivation-style life science and the shift from physical AI, robots to inorganic life science. Light-speed aircraft is the key technology of the 21st century. Turning modern science into the eastern new science plus goodness accumulation is the only way out for humans to get away from disasters. Scientific and technical revolution includes two kinds. One is the significant change inside life science or physical technology and the other is the shift from life science to physical technology or the shift from physical technology to life science. This is a disruptive revolution between good and evil. The eastern new science technology must replace modern technology so as to open up humans' moral era and the universal era.

Keywords: Science, Variety, Unity, Operation, Scientific Revolution Rule, Eastern New Science.

Introduction

Exploring the universe, nature, society and humans to gain knowledge and wisdom to guide human thoughts and behaviors has always been one of the important human activities since ancient times. This kind of exploring activity is called object-observing (Lao, 2022) in Taoism, "quantity theory" (Fang, 2013) in Buddhism and science in modern times. Here we call it "science" for convenience. Science is the activity for humans to get to know all the things in the universe and also the correct cognition and expression of them. All the stored knowledge of humans was gained through scientific exploration; it is also the correct cognition and expression of things in the universe; thus it is science. The difference is that it was not called science in ancient times. Science is the western (modern-time) name.

There is an important question: Can humans clearly understand all the phenomena in the universe? The answer is a big yes. Taoism and Buddhism have both thoroughly explored all the things in the universe. Buddhism says "Prajna is ignorant, but knows everything" (Fang, 2013). The state is beyond the understanding of modern science that originated in the west. There is another question: Since all the things in the universe can be clearly understood, can we unify the past, present and future of science to tell the good and evil of science, find the rules of scientific revolution, predict the future science and

solve the most urgent problem of life and death that humans are faced with at present? The answer is also a big yes.

As eastern traditional science (I Ching, Taoism, Buddhism, Confucianism, TCM and Chinese characters) has accomplished the cognition of all lives in the universe, it is life science. Modern science originating in the west has basically accomplished the cognition of substances and the substantial systems that form lives, and is thus physical science. Now, it's time to unify all varieties of science. With the unity of math (Jinzhong & Zhangxi, 2025) and the unity of cognitive science (Jinzhong & Zhangxi, 2025) accomplished, the unity of science, the journey of science and the rule of the several scientific revolutions appeared in turn. Then the eastern new science was born. The eastern new science and technology is the key to getting away from human disasters.

**Science and Its Variety, the Unity of Science
What is Science?**

Science is the activity to explore nature, society and humans to gain knowledge. According to this definition, scientific activity is a process that includes:

1. subject of scientific activity — humans;
2. object of scientific exploration — nature, society and humans themselves;

3. ways of scientific exploration: observational method and reasoning method, namely perceptual cognition (observation, experiment) and rational cognition (logic reasoning);
4. knowledge formation — expression of cognition results and knowledge systematization;
5. knowledge memory recording and spreading.

In different historical periods, humans have different qualities and use different ways to explore different objects, forming different science and knowledge. The word “science” means study of different subjects, so it not only includes individuals split from the entire body, namely modern science, but also includes the eastern overall science and western individual physical science.

The Classification of Science

Humans are the subject of scientific activity. When humans are in different states, their cognitive systems are in different states, the objects they cognize are different and different sciences are formed (Jinzhong & Zhangxi, 2025). Based on the difference in human cognitive states and cognitive objects, science is divided into life science and physical science.

Life Science

The universe is life; life is an entire body. The science that studies various lives in the universe is life science, which includes 0, 1, 2 and 3-dimensional life science. Life science cognizes life with life. It develops in two directions: the 0→1→2→3 life science process which develops from the universe body and the 3→2→1→0 life science process which comes into the universe body. Life science is the superior science, the internal exploring science and the subject of science.

Life science has four layers: 0, 1, 2 and 3-dimensional life (Jinzhong & Zhangxi, 2025; Jinzhong & Zhangxi, 2025). Different layers of life have different moral internal energy and bear different layers of life science.

Physical Science

Life is comprised of intangible spiritual systems and tangible substances and substantial systems. The science that only studies substances and substantial systems is physical science. Substances include 3, 2, 1 and 0-dimensional substances and also include the substance appearances, individual substances, substantial systems and substantial thoughts. It cognizes substances with substances and forms 3, 2, 1 and 0-dimensional physical science. Physical science is the inferior science and the external exploring science. It must return to life science and return to the universe body led by life science.

Physical science also includes four layers. Its developing process is 3, 2, 1 and 0-dimensional physical science, from substantial appearances to substantial division, substances as a whole to substantial cognition and thoughts (Jinzhong & Jun, 2013; Jinzhong & Zhangxi, 2025).

The Unity of Science

Like math and cognitive science, science goes through all the phenomena and subjects in the universe. Thus, from the unity of math (Jinzhong & Zhangxi, 2025) and the unity of cognitive science (Jinzhong & Zhangxi, 2025), we get the unity of science. See Chart 1.

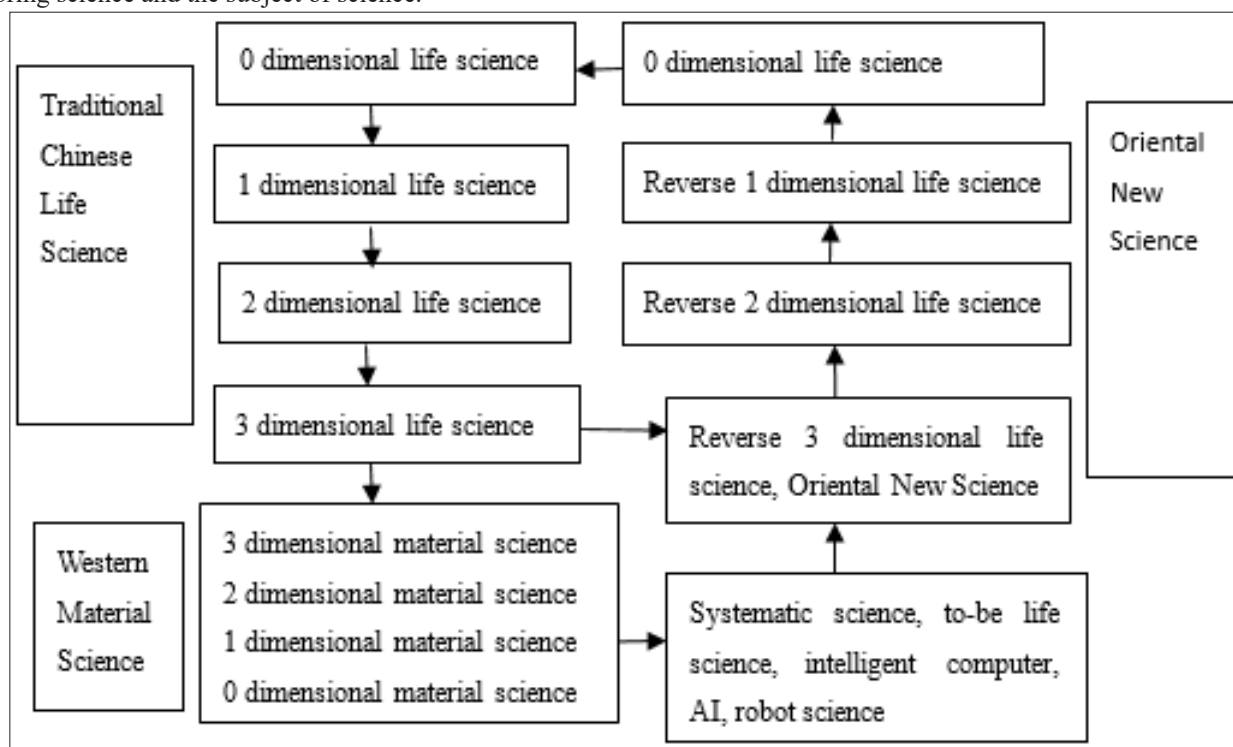

Chart 1: Unity and General Rule Operation of Science

Physical Science is Returning to Life Science

From Chart 1, we can see Tao $0 \rightarrow 1 \rightarrow 2 \rightarrow 3$ life science is the traditional life science and thinking science, namely I Ching, Taoism, Buddhism, Confucianism, TCM, Chinese characters and traditional medicines around the world. Physical science originating in Europe has gone through the $3 \rightarrow 2 \rightarrow 1 \rightarrow 0$ process and is now in the stage of life-to-be science represented by AI and robots. Extremes meet. Physical science has come to the end and is sure to study the entire body of life. As the theory of life science, namely I Ching (Jinzhong, 2017; Qicheng, 2004), has long existed, modern science is sure to integrate with traditional Chinese science to form new life science and thinking science, which is eastern new science. It will return to the universal general rule in the order of $3 \rightarrow 2 \rightarrow 1 \rightarrow 0$. As the universal general rule happened in China, the root of human science is in China. Physical science is the branch of the universal general rule spread in Europe; it is sure to return to China.

Dominated by the Universal General Rule, Science Operates and Changes with Some Characteristics

The universal general rule is the base for science. From Chart 1, we can see the characteristics of science's operation and change.

Life Science and Thinking Science Are the Dominant Sciences in the Universe

The Universe is life with thinking. The dominant sciences in the universe are life science and thinking science. Life science is internal-exploring science. Most of the time in human history has been in the life science age. That is to say, cultivating and elevating are humans' major tasks and the basic purpose for human beings (Jinzhong & Zhangxi, 2025). At the same time, to prevent humans from sinking into the physical science and technology age is the responsibility of the science community (Lao, 2022).

Physical Science Is Abnormal Science

Life is an entirety that cannot be separated. Dividing life into physical parts is killing it. Thus, modern physical science is evil science, external-exploring science and abnormal science. The 300-year bloody history when westerners ruled the world has fully proved this (Lao, 2022). The west has brought humans into the physical science age, which is the biggest tragedy and should be nailed to the pillar of shame of history.

Science Has Layers

Both life science and physical science have four layers: 0, 1, 2 and 3-dimensional. Life science can downgrade and upgrade while physical science was born from life science and its only way out is to return to life science.

Four-seasonal Prosperity and Decline of Science

Every science (life science and physical science) and every layer of science have its four-seasonal life period, which is the birth, development, decline and death four seasonal process. The basis for science's upgrade and downgrade shift is the universal general rule and four seasonal law (Jinzhong, 2015).

Opening and Closing of Science

The Opening and Closing of Life Science

The opening of life science refers to $0 \rightarrow 1 \rightarrow 2 \rightarrow 3$, or Tao-generating science. The closing of life science refers to $3 \rightarrow 2 \rightarrow 1 \rightarrow 0$, or the returning of life science to the universal general rule. In the time when there are only opening and closing of life science, there is no physical science, thus avoiding the evil and destruction of humans.

The Opening and Closing of Physical Science

From Chart 1, we can see physical science originates from 3-dimensional life science. The opening of physical science is a disassembling study, and its closing is an assembling study. The rise of physical science stands for evil in humans and the misfortune of humans.

The opening and closing of science and the four-seasonal movement of science form the spiral-style forward movement of science.

Different Times Produce Different Sciences

In ancient times, there was cultivation and elevation-focused life science. In modern times, there is material enjoyment-focused physical science. The two varieties are totally different. When times are different, humans have different qualities or moral internal energies and produce different sciences. This is dominated by the universal general rule (Lao, 2022).

Good and Evil of Science, Shift between Good Science and Evil Science

The Criteria for Good and Evil of Science

The science that purifies human souls and global environment, and brings harmony, happiness and peace to humans is good science. The science that damages human living conditions, poisons human souls, harms human health and brings humans wars and disasters is evil science. Human history has proved that ancient humans' cultivation-style life science is good science while modern physical science is evil science.

According to the four-season theory, extremes meet. When good science degenerates, it will turn into evil science. When evil science develops to the extreme, it will turn into good science.

Time and Space Distribution of Science

In terms of time, ancient times had cultivation-style life science and traditional medicines (including TCM and other traditional medicines around the world) while in modern times there is physical science. In terms of space, China is the center and origin of life science while Europe is the prosperous place of physical science.

Scientific Revolution

Dominated by the universal general rule, science changes and develops constantly with the overall four-seasonal movement of the solar system. It is a never-ending metabolism process. The significant changes between new and old are scientific revolutions. Both life science and physical science have gone through metabolism.

Space Distribution and Time Distribution of Science

I Ching, Taoism, Buddhism, Confucianism, TCM and Chinese characters stand for the universal general rule. The general rule is the dominator of life science and also the root of physical science. Why did the universal general rule happen in China? Why was Buddhism born in ancient India and then returned to the general rule (China)? Why did physical science (namely the western scientific revolution and the industrial revolution) happen in the west but not in China? We can find the answer from the universal general rule and the overall four-seasonal movement of the solar system.

Getting Tao 0 by Being in the Center: Why the General Rule Happened in China?

The four seasons and five elements are one of the most important rules (Jinzhong, 2015) of the universe. From Chart 2, we can see different areas on the earth have different seasonal states. The north pole and the south pole have only two seasons in a year. Europe has seriously unbalanced four seasons: winter, spring and autumn are long while summer is short. China and Maya regions have balanced four seasons. The seasonal states directly affect the five elements in human body, which also have decisive effects on cultivation and national personality.

Four-season balanced regions mean regions that are located in the center of four seasons. These regions can get enlightened. For example, China and Maya are both regions and nations that have got enlightened. These nations have outstanding characters: they produce a large number of sages. In the history of China, sages have been appearing since ancient times. With those sages teaching the people, the nations are civilized and harmonious. The nations located in four-season unbalanced regions produce no sages and so cannot get enlightened.

Why can one get enlightened by being in the center? To get enlightened, we must gather the five elements, combine the four images into De 1 and then integrate to get Tao 0 (Jinzhong & Zhangxi, 2020). China is located in the four-season balanced land, which is the root of the internal harmony in Chinese. So Chinese can go conversely to the universal general rule through cultivation (see Chart 3). Chinese are also strongly self-disciplined and have the five-element overall-balanced thoughts, so it's easy for them to combine into De 1 and get Tao 0, producing sages and then generating the universal general rule: I Ching, Taoism, Confucianism, TCM and Chinese characters. Regions outside China have incomplete or unbalanced five elements and people there have biased characters. So, they cannot get Tao 0 or produce sages. Their ways of thinking are totally different from those of Chinese. This is the root reason why the universal general rule happens in China.

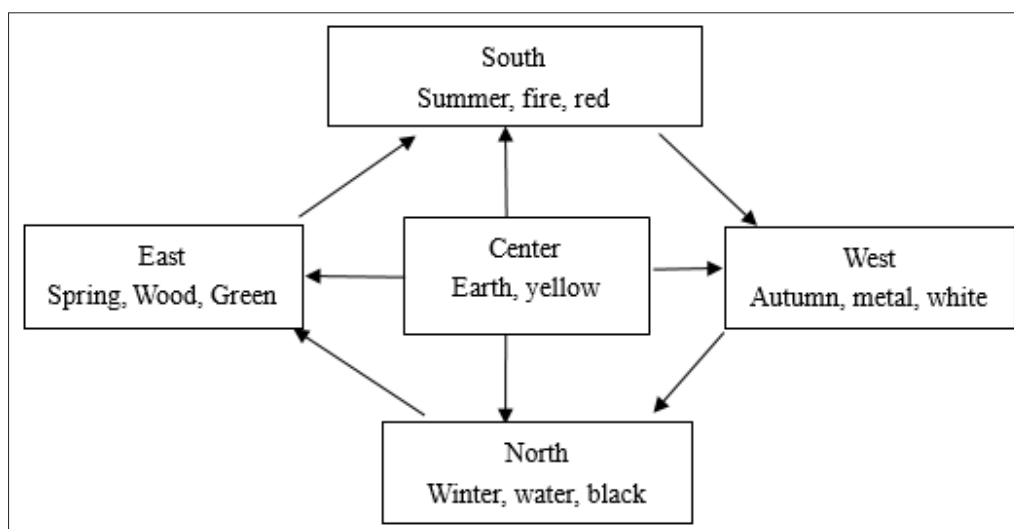

Chart 2: Four Seasons, Five Elements and Directions of the Earth

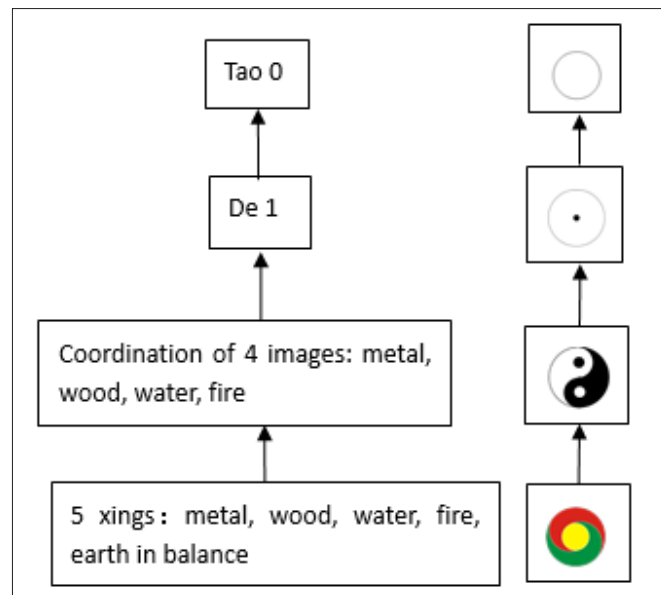

Chart 3: Getting Tao 0 by Being in the Center

Why Chinese Civilization is the Only Undisturbed Civilization?

The universal general rule is the dominator of the universe and it never disappears. The Chinese civilization is the civilization of the general rule and so the internal civilization that can thoroughly detect everything in the universe. The Chinese nation obeys the universal general rule and seeks for morality inside and harmony outside. When the nation is strong, it blesses the whole world and when the nation is weak, it endures humiliation and strives for self-improvement. Thus, the Chinese civilization can continue growing and will never end.

The place that gets Tao 0 and keeps open can last. It grows in the battle with evil forces. According to the general rule operation, China could get Tao 0 with savages around and then grow stronger constantly in the battle with savages when they invaded time and time again. China has achieved abundant life wisdom and so the nation can last. Maya was a closed place without information from the outside. With no external forces pushing it forward, Maya could not achieve life wisdom. When the westerners invaded, it had no chance of resistance and was wiped out by them.

Why Modern Science / Physical Science Happened in Europe?

The regions except China and Maya have unbalanced four seasons, sometimes severely unbalanced. So the universal general rule won't happen in the west. There is no five-element harmony inside the bodies of Europeans, so they are not good at cultivating and are unable to get life energy from the universe through cultivation. They are mostly extroverted; they like seeking external material enjoyment; and they produce physical science and technology. Once they get the chance, they vigorously develop physical science and technology, causing so-called modern-times science revolution and industrial revolution. These fully activate humans' material desire, namely evilness, which controls killing weapons to enslave

the whole human society. From Chart 2, we can see China is located in the center, which is earth in the five elements. The West belongs to the element of metal, represents autumn, and symbolizes harvest and killing. According to the five-element theory, earth produces gold, suggesting that Western material science could emerge from China and harvest the whole world.

Universal Background of Shift/Alternation between East and West Sciences: Overall Four-seasonal Movement of the Solar System

Following the eastern traditional science and technology came the rise of the western physical science and technology. Why did this shift/alternation come about? The answer is the overall four-seasonal movement of the Solar System.

According to Mayan belief, the entire Solar System circles around Pleiades and does four-seasonal movement with a period of 26,000 years (Yi, 2000; Jinzhong & Zhangxi, 2025). December 21, 2012 was the winter solstice point. See Chart 4. In the four-seasonal movement, the Solar System as a whole rises and falls in energy. In spring and summer, its energy rises; in autumn and winter, it falls. Human bodies are connected with the Solar System, so the internal energy inside human bodies also changes with the internal energy of the Solar System. In spring and summer of the Solar System, both the Solar System and human bodies rise their internal energy and thus seldom pose requirement to the outside, which is beneficial to cultivating and getting enlightened. In autumn of the Solar System, both the Solar System and human bodies begin to restrain their internal energy. But the internal energy is still high and humans can still cultivate. In winter of the Solar System, the Solar System hides its internal energy, which is unfavorable to cultivation. So, humans begin to seek materials from outside for supplement to survive. Especially in midwinter, Europeans lead a hard life and so need huge amounts of substances from the outside to survive. Then physical science begins to develop. This is why physical science takes the lead in the west. As the midwinter (December 21, 2012)

of the Solar System passed, the internal energy of the Solar System began to rise, the western science and technology was coming to the end and the eastern new science and technology began to appear.

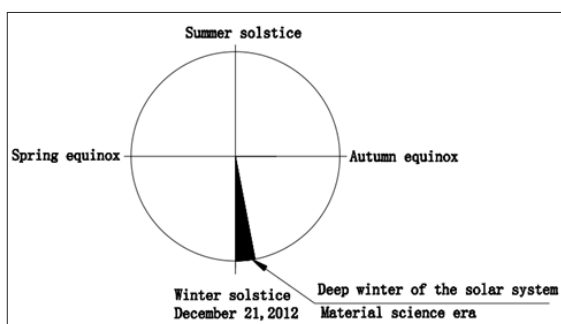

Chart 4: Overall Four-seasonal Movement of the Solar System and Physical Science

Eastern New Science

What is Eastern New Science?

Everything has the four-seasonal life period. From Chart 1, we can see with the ending of the traditional life science period came the rise of western physical science and technology. Modern science's research into substances has come to the end and its life period has basically ended. Then come the to-be life science and thinking technology: computers, AI, robots and intelligent systems (Jinzhong & Zhangxi, 2020). One day the real life science and thinking technology will eventually appear. The theory of life science is China's I Ching (Jinzhong, 2017). Therefore, the edge of modern science is shifting into the traditional Chinese life science. As this shift is contrary to the one in history from life science to physical science and has a different basis, what humans will produce is the eastern new science, which is centered on I Ching, Taoism, Buddhism, Confucianism and TCM. It is a new life science and thinking science formed by combining I Ching, Taoism, Buddhism, Confucianism and TCM with modern science and technology. It includes the revival of traditional science and technology and the rise of inorganic life science and technology.

Two Basic Theories of Eastern New Science

The main component of I Ching is yin-yang five elements and the great ultimate eight trigrams, which show two basic theories that modern humans can easily understand: the four-season theory (Jinzhong & Jun, 2013) and the state time-space theory (Jinzhong, 2013). These two theories express traditional Chinese science with modern language and integrate modern physical science into the overall life science to build the new life science. The unity of physics and biology is the hub for modern science shift into life science. The state time-space is the base for the revival of traditional cultivation technology and the further upgrade of the new science. The eastern new science and technology will begin a new round of technological revolution (Jinzhong, 2014).

Ten Major Technologies of Eastern New Science

According to the eastern new science, I want to put forward ten most attractive and most challenging technologies in the 21st century. All these technologies are characterized by life and thinking.

1. Inorganic life materials (Jinzhong & Jun, 2013; Jinzhong & Zhangxi, 2019). The present intelligent materials will evolve into inorganic life materials / organic life materials.
2. Inorganic life bodies (Jinzhong & Jun, 2013; Jinzhong & Zhangxi, 2020). Intelligent robots will evolve into complete inorganic life bodies (inorganic humans).
3. Human body upgrading technology. It directly upgrades humans' intelligence, strength, inner energy, health, etc. with life energy.

The above three are the basic breakthroughs. They lead to comprehensive technological breakthroughs, including:

4. The whole artificial world becoming alive.
5. Significant breakthrough in educational technology. This technology will input knowledge directly into human brains.
6. Human cultivation mechanization. Machines will cultivate for humans and human bodies enter the "one day in heaven, one year on the earth" time stretching-shrinking state at any time.
7. Life computers that use inorganic cells as nerve cells. This is a great leap in computer hardware quality.
8. Exploitation of life energy and thinking energy (Jinzhong & Zhangxi, 2026) that will replace physical energy and chemical energy and others causing pollution and destruction. The life energy in the universe is lasting and endless.
9. Restoration and direct creation of organic life.
10. Development of light-speed aircraft (Jinzhong & Zhangxi, 2026).

The Way to Solve Human Disasters: Eastern New Technology

Modern Science and Technology Is the Biggest Block for Human Moral Culture Revival

In recent years, to save humans and the earth, avoid the end of mankind and awake the revival and returning of human morality, large numbers of wise people, cultural groups, religious societies are sparing no efforts to spread traditional moral and cultural ideas. Although they have achieved some results, little is done to the whole world situation. Humans are falling at a greater speed; the environment is increasingly being damaged and poisoned; wars, plagues, earthquakes and wind disasters are becoming more frequent and more severe. Modern science develops faster and faster. Its huge inertia and damage are dragging mankind into hell at a higher speed, which cannot be stopped by moral and cultural education.

In the 1970s, Arnold Toynbee, a historian from England, said, "Only the theories of Confucius and Mencius and Mahayana Buddhism can solve the social problems of the 21st century". Therefore, westerners also have seen the terrible danger posed by western science. However, science and technology never stop developing and cultural renaissance is alone and weak. It is already too late to solve the urgent problems that humans are faced with by reviving traditional moral culture.

Science and Technology Shift Plus Goodness Accumulation Are Humans' Only Way to Get Away from Disasters

Science and technology determine everything. But modern science and technology are the root of all human disasters. Modern science and technology pose huge dangers but all the countries cannot give them up. This is a big contradiction. The only way out is to shift to good and righteous science and technology, namely the eastern new science, which is much superior to modern science and technology. The eastern new science will push the revival of traditional moral culture.

Eastern New Science and Technology Can Defeat Modern Science and Technology

According to system science, the overall function is much bigger than the sum of the parts. AI, robots, smart computers, etc. can only simulate a small part of human function but still have powerful function. The next steps of development of AI, robots, smart computers and smart systems respectively correspond to life wisdom, inorganic humans, life computers and inorganic life system in the eastern new science and technology. Their functions will highly surpass the present robots, AI and computers. That is to say, the power of the eastern new science and technology will be hugely stronger than that of modern science. The eastern new science will defeat modern science and technology.

Scientific and Technological Revolution in the Process of Science and Technology

How to define technological revolution? Or how to find the order and rule of scientific revolution and industrial revolution? This is the problem that the scientific community has long researched into. From Chart 1, we can find the answer easily.

What Is Called Scientific and Technological Revolution?

Scientific and technological revolution includes scientific revolution and technological (industrial) revolution. It happens when great improvement in science and great improvements or change in corresponding technology and industry totally surpass the previous science and technology. Scientific and technological revolution is the giant leap or significant shift in science and technology.

Two Types of Scientific and Technological Revolution

Science is divided into life science and physical science. So scientific and technological revolution also includes two types. One is the significant progress inside life science and technology or inside physical science and technology. The other is the shift from life science and technology (eastern science and technology) to physical science and technology (western science and technology), or the shift from physical science and technology to life science and technology. This is the good-evil overturning scientific and technological revolution.

Four Revolutions of Life Science

Life science is divided into 0, 1, 2 and 3-dimensional life science. The scientific and technological revolution inside life science includes the $0 \rightarrow 1 \rightarrow 2 \rightarrow 3$ layer shift, which is humans' falling "revolution" (Lao, 2022). The scientific and technological revolution inside life science also includes the

$3 \rightarrow 2 \rightarrow 1 \rightarrow 0$ layer shift, which is the revolution of human upgrade and the revolution of human improvement. Life science and technology is internal-exploring science and technology and good science and technology. It seeks for morality inside and harmony outside. When humans are in the state of life science and technology, they won't get into the present disasters.

Four Revolutions of Physical Science

Physical science is also divided into 3, 2, 1 and 0-dimensional physical science. The scientific and technological revolution inside physical science refers to the $3 \rightarrow 2 \rightarrow 1 \rightarrow 0$ layer evolution. The development of physical science and technology is from the outside to the inside, from the shallow to the deep, from the individual to the whole, from the simple to the complex and from substances to energy, information and then wisdom. It has gone through the mechanical times, the electrification and automation times and the information times; it is now in the intelligence times; and it will enter life science and technology. Physical science and technology is the external-exploring science and technology and the evil science and technology. External exploration is sure to bring competition, fight and wars. The appearance of physical science and technology was a big retrogress of humans, bringing cliff-like corruption and evil. Humans have been trapped in 300 years of grave disasters.

Good-Evil Overturning Scientific and Technological Revolution

It includes the shift from life science and technology to physical science and technology and the shift from physical science and technology to life science and technology.

The western overturning scientific and technological revolution. It is the shift from life science and technology to physical science and technology, namely the so-called modern-time scientific revolution and industrial revolution in the west. The west defeated China, which was the overturning revolution when truculence defeated civilization. The world has thus sunk into truculence and darkness till today.

The eastern overturning scientific and technological revolution. This new overturning scientific and technological revolution is the shift from the west physical science and technology to the east science and technology, or the eastern new science and technology replaces modern science and technology. This is a second life-and-death battle between the east and the west and a battle between civilization and truculence. Civilization will be sure to defeat truculence and humans are sure to enter a bright age.

Conclusion

1. Science is the activity to explore nature, society and humans to gain knowledge. Science is mainly divided into two types, life science and physical science, both of which have 0, 1, 2 and 3-dimensional layers. All types of science are unified in the universal general rule.
2. Life science and thinking science are the dominant sciences in the universe; they are good science. Physical

- science is an abnormal science and evil science. China is the major origin of life science while Europe is the base for physical science.
3. The universal general rule determines the type, layer, good and evil, change, open-close of science and the rule of scientific and technological revolution.
 4. China is located in the four-season balanced land, which is why the universal general rule and life science happened in China and also why the Chinese civilization has never been interrupted. Europe is located in the four-season unbalanced land, which is why modern physical science happened there.
 5. The overall four-seasonal movement of the Solar System is the universal background of the shift/alternation between eastern science and western science. China is the center of the world's traditional life science; I Ching, Taoism, Buddhism, Confucianism and TCM form the traditional eastern science. When the Solar System was in midwinter, the scientific center moved to Europe and physical science happened there. With the start of the winter solstice of the Solar System overall four-season, the western physical science has come to the end and the eastern new science is taking the stage.
 6. The eastern new science is the new life science and thinking science formed by combining I Ching, Taoism, Buddhism, Confucianism and TCM with modern science and technology. It includes the revival of traditional cultivation life science and the shift from physical AI and robots to inorganic life science. The light-speed aircraft will be the key technology of the 21st century.
 7. The western physical science and technology is the root of all human disasters and also the biggest resistance to the revival of traditional human morality. Turning modern science into eastern new science plus goodness accumulation is the only way for humans to get away from disasters.
 8. Scientific and technological revolution includes two types. One is the significant revolution inside life science and technology or inside physical science and technology. The other is the shift from life science and technology (eastern science and technology) to physical science and technology (western science and technology), or the shift from physical science and technology to life science and technology. This is the good-evil overturning scientific and technological revolution. The eastern new science and technology is sure to replace modern science and technology and will begin humans' harmony (morality) age and universal age.
